

### BTEC level Three Applied Science – Transition Activity

Create a poster on the **periodic table**. Your poster should contain information on the following areas:

- Periods
- Groups (chemical and physical properties)
- Trends
- Atomic structure

You can gather information from either books or the internet, but all the information on the poster should be referenced. Advice on different referencing techniques can be found on the internet – we will be looking at the different techniques people have chosen in lesson, so be prepared to explain to the class how you went about referencing the information that you used.

Make sure you have your poster with you when you come to the first lesson of the course in September. The work will be peer assessed and will feed in to your first assignment.

If you have any queries, contact Mr Grenfell at:
